

CareerPilot: Grounded, Human-Controlled Applications

Takeaway: Ship profile → Fill with evidence honesty — human keeps Submit.

PROBLEM

- Scoring & generation can outrun evidence
- Stale packages & cross-user leakage destroy trust
- Form automation can cross into Submit

GOAL

- Grounded workflow to assisted application
- Human controls eligibility, EEO/terms, Submit
- Local / self-hostable v1 — not hosted SaaS

Never auto-submits · EEO / terms stay manual · Greenhouse + Lever Fill only (certified)

Program proof: explainable Fit, grounded materials, human approval, assisted Fill — with live acceptance evidence.

Architecture + Critical Path

Takeaway: One local app — strict evidence chain, not microservices theater.

React / Vite + Chrome extension

FastAPI

SQLite / SQLAlchemy

EXTERNALS

Job sources

AI providers

Greenhouse / Lever

Architectural decisions

- Deterministic Fit does not depend on an LLM
- Fingerprints invalidate stale evidence / materials
- ATS identity uses posting IDs — never fuzzy title/company

DATA BOUNDARY

Shared job catalog vs User-scoped private records
(profile, materials, tracker, analytics, saved searches)

CRITICAL PATH

identity → candidate evidence → posting requirements
→ deterministic Fit → materials → approval → Fill

Program Plan + Risks

Takeaway: Small-team workstreams; Fit redesign mid-flight; privacy as a ship gate.

OWNERSHIP (small team — not a large org)

TOP RISKS → MITIGATIONS

Launch Evidence + Release Provenance

Takeaway: CI is necessary; live ATS/privacy acceptance is decisive — and SHA-bound.

AUTOMATED GATES (tag-time)

- Frontend tests: 226
- Extension tests: 109
- Mapped paths: 124 valid / 0 missing
- CI + dependency audits
- Full-history secret scan (Gitleaks)

LIVE / MANUAL ACCEPTANCE

- Greenhouse Fill certified (Chrome 152)
- Lever Fill certified — never Submit
- A9 isolation / IDOR / account deletion
- Phase 6 adversarial: no open P0/P1
- Attachment: filename alone $\neq$ proof

RELEASE PROVENANCE

Certified runtime 7b6c3ee $\neq$ release tag v1.0.0 b73a983

Later docs/version commits did not inherit runtime certification.

Results, Tradeoffs, Next Step

Takeaway: Honest scope is a quality decision — not a lack of ambition.

SHIPPED

- Grounded candidate / job evidence
- Deterministic Fit + human approval
- Greenhouse / Lever assisted Fill
- Private per-user workflows
- Tagged immutable v1.0.0

DELIBERATELY NOT SHIPPED

- Auto-submit / auto-apply
- Universal ATS support
- Hosted production SaaS
- EEO / consent automation

Lessons: live acceptance when CI can't prove browser behavior · release provenance matters · exclusion can improve quality

Next: targeted post-v1 correctness + migration maturity — not random feature expansion.
